## SPILL/RELEASE REPORT (SUPPLEMENTAL)

This form is to be submitted by the party responsible for the oil and gas spill or release. Any spill or release which may impact waters of the State must be reported as soon as practicable; any spill over 20 bbls must be reported within 24 hours and all spills over five bbls must be reported within ten days. Submit a Site Investigation and Remediation Workplan (Form 27) when requested by the Director.

Waters of the State ☐    Residence/Occupied Structure ☐    Livestock ☐    Public Byway ☐    Surface Water Supply Area ☐

*As defined in COGCC 100-Series Rules*

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A dump line release was discovered during the replacement of the produced water sump at the Warren 29-9L & 29-16L production facility. Excavation of impacted material commenced on July 15, 2014, and approximately 240 cubic yards of impacted material was removed and transported to Buffalo Ridge Landfill in Keenesburg, Colorado for disposal. Soil samples were collected from the sidewalls and the base of the excavation area at 10 feet and 19 feet below ground surface (bgs), respectively. Soil samples were submitted to eAnalytics Laboratory for the analysis of BTEX and TPH. Analytical results returned on July 16, 2014 indicate constituent concentrations in the soil sample collected from the base (B01) of the excavation are in exceedance of applicable COGCC Table 910-1 standards. Additional excavation will not be completed due to unstable soils. Consequently, this release is reportable as impacted soil will be left in place for subsequent in situ remediation.

How was extent determined?

A dump line release was discovered on July 16, 2014, during the replacement of a produced water sump at the Warren 29-9L & 29-16L production facility. Excavation activities were conducted between July 15 and 16, 2014. Approximately 290 cubic yards of impacted soil was removed and transported to Buffalo Ridge Landfill in Keenesburg, Colorado for disposal. The lateral extent of the excavation was determined in the field through the use of a photoionization detector (PID) to measure volatile organic compound (VOC) concentrations, and through the collection and analysis of soil samples as described in the Initial Form 19. The excavation was subsequently backfilled and re-contoured to match pre-existing conditions; impacted soil was left in place to be addressed by future in-situ remediation.

Cause of Spill (Check all that apply)	
<input type="checkbox"/> Human Error	<input checked="" type="checkbox"/> Equipment Failure
<input type="checkbox"/> Historical-Unknown	<input type="checkbox"/> Other (specify) _____
Describe Incident & Root Cause (include specific equipment and point of failure)	
A release from corroded produced water and oil dump lines was discovered during the replacement of a produced water sump.	
Describe measures taken to prevent the problem(s) from reoccurring:	
The battery was rebuilt with a geosynthetic liner, poly drain lines, and a double wall fiberglass produced water tank.	
Volume of Soil Excavated (cubic yards): 290	
Disposition of Excavated Soil (attach documentation)	
<input checked="" type="checkbox"/> Offsite Disposal	<input type="checkbox"/> Onsite Treatment

Volume of Impacted Ground Water Removed (bbls): 0	
Volume of Impacted Surface Water Removed (bbls): 0	

## REQUEST FOR CLOSURE

**Spill/Release Reports should be closed when impacts have been remediated or when further investigation and corrective actions will take place under an approved Form 27.**

Basis for Closure:

☐ Corrective Actions Completed (documentation attached)

☐ Work proceeding under an approved Form 27

Form 27 Remediation Project No: \_\_\_\_\_

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
