

# **NARRATIVE ATTACHMENT**

## **FORM 4 (SUNDRY NOTICE)**

### **Earthen Pit (Fiberglass Tank) Closure Bar X Unit (Govt 34-1)**

Document Date-9/5/2014

---

#### **Introduction**

National Fuel Corporation (NFC) is submitting this Form 4 Sundry Notice to request final closure status for the earthen pit (w/fiberglass tank) associated with the Bar X Unit Govt 34-1 (COGCC facility #119473, COGCC remediation #8338). The site investigation was conducted by a third party contractor as authorized by NFC personnel and in accordance with the approved Form 27 previously submitted for this location. All samples were collected in accordance with NFC's Sampling Procedures. The analytical results for the respective soil samples are provided in Table 1 and Attachment A of this submittal. The text below provides the details of the site investigation. For a visual description of the site please refer to Figures 1, 2, and 3 – Site Maps.

#### **Assessment Activities**

August 25, 2014 - The excavated soil surrounding the earthen pit (w/figerglass tank) was screened utilizing a photoionization detector (PID) prior to collecting soil samples for laboratory analysis. The fiberglass tank was carefully removed using a trackhoe and placed onsite for later recycling or disposal. It should be noted that the fiberglass tank was pumped out prior to removal. A grab sample was collected directly from the lowest point of the pit after excavation. In addition, four (4) grab samples were collected, one from each excavated sidewall. Approximately 100 cubic yards of excavated material was removed from the pit and laid out in 2 foot tall (50' x 25') lift for evaluation of impacts. The excavated material was sampled by way of a nine (9) point composite sample. Four (4) background samples were collected from approximately six (6) inches beneath the grounds surface for analysis with regards to arsenic.

#### **Analytical Review**

Sample results indicate that soil within the earthen pit (w/fiberglass tank) footprint on NFC's Bar X Unit #Govt 34-1 well pad, had organic constituent concentrations below or within COGCC Table 910-1. Analytical results indicated the excavated material exceeded COGCC Table 910-1 allowable concentrations for arsenic (4.6 ppm) and SAR (16). Though the arsenic concentration in the soil is above the allowable concentration identified in Table 910-1, the concentration is close to the range of arsenic background values (3.7 – 4.5 ppm) in this area. Based on these results and footnote 1 to COGCC Table 910-1, NFC requests that the COGCC consider the higher range of background arsenic value(s) as the allowable concentration for this constituent. Please see Table 1 and Attachment A for the analytical results.

Though the elevated arsenic and SAR levels of the returned spoil material within the excavated footprint area is above the allowable levels identified in Table 910-1; it will be buried greater than three feet bgs of existing pad footprint material to assure that material with elevated level of arsenic and SAR will have no adverse effect on future re-vegetation efforts and receptors in the area. Please see Table 1 and Attachment A for analytical results.

#### **Conclusion**

---

# **NARRATIVE ATTACHMENT**

## **FORM 4 (SUNDRY NOTICE)**

### **Earthen Pit (Fiberglass Tank) Closure Bar X Unit (Govt 34-1)**

Document Date-9/5/2014

---

Based on the site investigation and analytical results, the pit associated with the Bar X Unit #Govt 34-1 is in compliance with the standards specified within COGCC Table 910-1. NFC respectfully requests that final closure be granted for the respective pit, COGCC remediation #8338.

#### **Notification of Completion**

This Sundry Notice is also being submitted as the Notification of Completion for Remediation #8338. If the information provided here is satisfactory, please provide documentation of the closure of this remediation project.

**List of Analytes with QC Qualifiers**

Sample Number	Work Group	Sample Type	Analyte	Run ID	Qualifier
L718093-06	WG739679	SAMP	Mercury	R2982175	P1

Attachment B  
Explanation of QC Qualifier Codes

Qualifier	Meaning
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.
