Form 2A COAs:

Group	User	Comment	Date
OGLA	kubeczkd	<p>No portion of any pit that will be used to hold liquids shall be constructed on fill material, unless the pit and fill slope are designed and certified by a professional engineer, subject to review and approval by the director prior to construction of the pit. The construction and lining (if applicable) of the pit shall be supervised by a professional engineer or their agent. The entire base of the pit must be in cut.</p> <p>Pits containing flowback fluids or produced water must be lined with a minimum 24 mil HDPE liner.</p> <p>For pits containing fluids other than freshwater only; the pit must be fenced. If the pit is not drained, or closure has not begun within 30 days after last use for well completion, the pit must be netted. The operator must maintain the fencing and netting until the pit is closed.</p> <p>Pits used exclusively for drilling shall be closed in accordance with the 1000-Series Rules. Any pit(s) used for purposes other than drilling shall be closed in accordance with Rule 905. Closure of Pits, and Buried or Partially Buried Produced Water Vessels; with an approved Site Investigation and Remediation Workplan, Form 27.</p>	05/27/2014
OGLA	kubeczkd	<p>The moisture content of any drill cuttings in a cuttings trench or pile shall be as low as practicable to prevent accumulation of liquids greater than de minimis amounts. At the time of closure, if drill cuttings are to remain/disposed of onsite, they must also meet the applicable standards of table 910-1.</p> <p>If the well is to be hydraulically stimulated, flowback and stimulation fluids must be sent to tanks, separators, or other containment/filtering equipment before the fluids can be placed into any pipeline or storage vessel located on the well pad; or pit located adjacent to the well pad; or into tanker trucks for offsite disposal. The flowback and stimulation fluid tanks, separators, or other containment/filtering equipment must be placed on the well pad in an area constructed to be sufficiently impervious to contain any spilled or released material.</p>	05/27/2014

OGLA	kubeczkd	Notify the COGCC 48 hours prior to start of pad construction, pit construction, rig mobilization, spud, pipeline testing, start of hydraulic stimulation operations, and start of flowback operations using Form 42 (the appropriate COGCC individuals will automatically be email notified, including the LGD for hydraulic stimulation operations).	05/27/2014
OGLA	kubeczkd	Operator shall pressure test pipelines in accordance with Rule 1101.e.(1) prior to putting into initial service any temporary surface or permanent buried pipelines and following any reconfiguration of the pipeline network.	05/27/2014
OGLA	kubeczkd	Operator must ensure secondary containment for any volume of fluids contained at well site during drilling and completion operations; including, but not limited to, construction of a berm or diversion dike, diversion/collection trenches within and/or outside of berms/dikes, site grading, or other comparable measures sufficiently protective of nearby surface water. Any berm constructed at the well pad location will be stabilized, inspected at regular intervals (at least every 14 days), and maintained in good condition.	05/27/2014

S/A/V: SATISFACTORY **Comment:** COA's met at time of inspection. Discussed the importance of maintaining location berms.

Wildlife BMPs:

BMP Type	Comment
Material Handling and Spill Prevention	Once the well is drilled and completed onsite KGH will prepare a SPCC plan for the site.
Wildlife	<p>SENSITIVE WILDLIFE AREA BMP</p> <ol style="list-style-type: none"> Where oil and gas activities must occur in mule deer critical winter range or elk winter concentration areas, conduct those activities outside the time period from December 1 through April 15 (construction and drilling operations). Restrict post-development well site visitations to between the hours of 10:00 AM and 3:00 PM and reduce well site visitations between December 1 and April 15 in mule deer and elk winter range. Establish company guidelines to minimize wildlife mortality from vehicle collisions on roads. Gate single-purpose roads and restrict general public access to reduce traffic disruptions to wildlife. Close and immediately reclaim all roads that are redundant, not used regularly, or have been abandoned to the maximum extent possible to minimize disturbance and habitat fragmentation. Avoid aggressive non-native grasses and shrubs in mule deer and elk habitat restoration. Reclaim mule deer and elk habitats with native shrubs, grasses, and forbs appropriate to the ecological site disturbed. Restore appropriate sagebrush species or subspecies on disturbed sagebrush sites. Use locally collected seed for reseeding when possible.
Storm Water/Erosion Control	Stormwater management will be managed under KGH Operating Companys' (KGH) Stormwater Managenet Plan prepared for the project area. Prior to construction, a stormwater "perimeter" will be built around the site for initial work purposes. Once the drilling pad construction is completed, the site will be inspected and necessary Erosion Control Devices needed to manage sediment discharge from the pad will be installed. These devices may include but are not limited to: Rock Check Dams; Settling Ponds; Straw Waddles and; Silt Fencing.
