## OPERATOR COMMENTS AND SUBMITTAL

Comments

The location footage numbers are correct from the nearest section line and the location has been resurveyed (NAD83). Nearest above ground utility is owned by Black Raven - it was used to power the submersible pump when the well was producing. This power line will be deactivated when the work is being done. Nearest property line is 330 ft from the site. The well is currently a shut-in J-Sand producer which we plan to reactivate. If the J Sand reactivation is not successful, then the well will be recompletd in the D Sand. Plan to set a CIBP above the current J Sand perms and recomplete the D Sand. A Form 2A is not required for this recompletd because no pit will be constructed and there will be no surface disturbance beyond the originally disturbed area. No conductor casing was set when the well was drilled; the casing consists of a surface string and a production string.
