COMMENTS:

We did further analysis of the aquifers in the area of PDC Energy's Tarin well pad located in Section 32, T4N, R66W. Our original offset well analysis referenced a water well in the area with a depth of 520 feet and the conditions of approval from the Colorado Oil and Gas Conservation Commission were based on the depth of this water well.

Additional research shows the base of the Fox Hills in the area of the Tarin well pad to be at +/- 222 feet. A well log from the area (the Glen #1, API 05-123-13678) does not show any sands below its surface casing depth of at 205'.

Based on this more detailed information, we would request that the conditions of approval for the following existing well near the PDCE Tarin well pad be changed from Option 1 or 2 to Option 4. (MONITOR BRADENHEAD DURING OFFSET FRACING. PULL TUBING, INSTALL RBP, PRESSURE TEST CASING TO 2000 PSI, INSTALL 5K WELLHEAD)

NICHOLAS 1 (API NO 123-20331) - This well has 213 feet of surface casing coverage below the base of the Fox Hill aquifer (at 222 feet). The well also has 2691 feet of primary cement coverage over the Niobrara formation.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million)

Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
