As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

At approximately 2:15 pm on 10/21/14, a lease operator was on location gauging tanks. He shut-in production to one tank without diverting oil into another production tank. Oil backed up in the vapor recovery tower (VRT) downstream of the separator. A pressure relief valve activated and a mist of oil was released from the top of the tower. Approximately 1bbl of oil was released across the location and onto some vegetation west and south of the pad. A supervisor arrived on location when the oil release was reported and opened a valve allowing oil to flow from the VRT to another production tank. Impacted surface soils will be scraped and properly disposed of at the Waste Management facility located in Ault, Colorado. Soil samples will be collected by a third party consultant to verify compliance with COGCC Table 910 after cleanup is completed and any additional details will be provided in a supplemental report to this Form 19.
