Wildcat Ranch Pit #110672 ~ NESE S35-T6N-R59W ~ API#05-087-07611 ~ Remediation Project #7450

Based on review of information submitted to date, it appears that no further action is necessary at this time, and COGCC approves the request to close this pit project. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards, or if ground water is found to be significantly impacted, then further investigation and/or remediation activities may be required at the site. The pit, Facility ID#110672, and the remediation project (#7450) have been changed to closed status in the Colorado Oil & Gas Information System (Document #200416287). Note that final surface reclamation must meet COGCC Series 1000 rules. Please retain a copy of this email as verification of COGCC's No Further Action determination.

Thank you,

Ann C Eckman, PG
Environmental Protection Specialist

Betty Jean and Wildcat Ranch pit closures, Remediation Projects 7447 and 7450

Mr. Tucker,

This email is to confirm that we have received the soil sampling results and pit sampling diagrams you submitted yesterday. As I indicated during our phone conversation this morning, Tindall does have permission to backfill the pits based on the confirmation sampling done. *However, the soils identified as impacted above Table 910-1 criteria for TPH and benzene are considered to be E&P waste, and may not be used as back fill* (even if they are mixed with non-impacted soils to "dilute" the soil to TPH levels below Table 910-1). Should you wish to pursue treating this impacted soil for potential re-use, please consult COGCC 900 and 1000 Series Rules. Specifically, note Rule 907 outlined below.

907. MANAGEMENT OF E&P WASTE

a. General requirements.

(1) Operator obligations. Operators shall ensure that E&P waste is properly stored, handled, transported, treated, recycled, or disposed to prevent threatened or actual significant adverse environmental impacts to air, water, soil or biological resources or to the extent necessary to ensure compliance with the concentration levels in Table 910-1, with consideration to WQCC ground water standards and classifications.

(2) E&P waste management activities shall be conducted, and facilities constructed and operated, to protect the waters of the state from significant adverse environmental impacts from E&P waste, except as permitted by applicable laws and regulations.

900-8 As of May 30, 2011

(3) Reuse and recycling. To encourage and promote waste minimization, operators may propose plans for managing E&P waste through beneficial use, reuse, and recycling by submitting a written management plan to the Director for approval on a Sundry Notice, Form 4, if applicable. Such plans shall describe, at a minimum, the type(s) of waste, the proposed use of the waste, method of waste treatment, product quality assurance, and shall include a copy of any certification or authorization that may be required by other laws and regulations. The Director may require additional information.

Please remit a plan as outlined above, or soil disposal manifests, along with accurate lat/long measurements for each pit. The Remediation Project numbers (7447 and 7450) will remain open. Please submit the information directly to me at annie.eckman@state.co.us, referencing the remediation project number. Call me or John Axelson if you have any questions.

Thanks,

Annie Clements Eckman, P.G., for

John Axelson, P.G.
