Eric,

I need to be able to confirm at a minimum that the area is at least graded to match surrounding with no low areas. It's hard to see any detail in these pictures. Possibly a smudge on the lens? Please resubmit at least one clear picture in each cardinal direction. Create one pdf of the pictures with a header referencing location and remediation project number with a caption below each picture that indicates which direction the picture was taken with the date.

Please let me know if you have any questions.

Thank you,

John E. Axelson, P.G.

John,

Per your request attached are photo of the backfilled area from the historic release at the subject site. As we discussed the Form 27, manifests and accompanying information were submitted on August 5, 2014. The Landowner was contacted to sign a letter relinquishing Magpie from vegetating the area due to planting scheduled in the spring, but the landowner was upset about other issues. As the impacted soils have been characterized and removed; and the surface has been backfilled to match grade, Magpie would like to request NFA with regards to the soil remediation #8281 pending final approval from the landowner regarding the vegetation of the area.

Thank you for all of you help on this matter.

Subject: Fw: Little Beaver 30 Final Remediation

Eric,

I have attached five photos from the Little Beaver/Wagers site. There is some cloudiness beyond the immediate foreground. I hope these will suffice.

Thanks,

Ryan
