RECLAMATION

INTERIM RECLAMATION

☒ Interim Reclamation will commence approximately 11/17/2014
Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Interim reclamation complete, site ready for inspection.
Per Rule 1003.e.(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

☐ Final Reclamation will commence approximately _____
Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____

General Comments

<u>User Group</u>	<u>Comment</u>	<u>Comment Date</u>
Inspector	COGCC inspector requests an explanation as to why areas infested with Russian knapweed will be flagged off and avoided during the reseeded effort. How will these areas be revegetated otherwise? Perennial species need to be established to eventually out-compete weedy species.	12/3/2014 10:49:08 AM
Inspector	The report states that there will be a comparison with the location and a "random adjacent area transect" to achieve 30% vegetation after a year to determine if contingency fertilizer, soil amendment, and mulching plans are needed. A random adjacent area transect would not be the best way to determine this because it is not what COGCC will use to determine reclamation success. We recommend using a reference area vegetation transect that is not random but contains soil and vegetation composition representative of pre-disturbance vegetation (excluding noxious weeds).	12/3/2014 10:26:45 AM
Inspector	COGCC Reclamation Specialists strongly recommend mulching the location at the time of seeding. Mulching is known to provide several benefits (such as increased soil moisture, microbial activity, decreased erosion, etc.) to reclamation locations.	12/3/2014 10:22:20 AM
Inspector	Herbicide weed treatment on newly seeded areas in spring after seed application will likely result in mortality of newly germinating seedlings of planted species. We recommend that herbicide treatment be delayed until young seedlings are established and use a mechanical weed control when needed.	12/3/2014 10:20:18 AM
Inspector	Approval of this plan is an acknowledgement that the plan was received and is not an approval of the methods in the plan.	12/3/2014 10:15:56 AM
