Cc: Jane Stanczyk - DNR <jane.stanczyk@state.co.us>

Good Morning, All,

I appreciate your call yesterday to discuss the reason why no open hole log was run on this well. Per our phone conversation, please submit a Form 4 to report the following:

- 1) This well was not logged with either an open hole resistivity with gamma ray log or a cased hole pulsed neutron log. (Only the Leadville section was open hole logged.) However, a mud log was run.
- 2) The well currently has a BP @ 3000' which would require a workover rig to remove in order to run a cased hole pulsed neutron log. Current status is TA. Request continued TA status.
- 3) Plans for this well are unknown but dependent upon seismic to be acquired, processed, and interpreted. Timeframe for completion of this seismic study is approximately July, 2015.
- 4) Operator plans to run the cased hole pulsed neutron log over the vertical section of the wellbore if future plans include entering the wellbore to drill a sidetrack.

Please email me the document # for this Form 4 when you submit it. I will approve this sundry with a Condition of Approval that operator will update this well's status by 12/1/2015.

The COGCC will evaluate this situation again at such time as Kinder Morgan decides to plug the well.

Please determine if any formations have been perforated, treated, and production tested. A Form 5A is due if this is the case. Also, no Form 7 reporting has been done to date. This should have begun 7/2014 when the well spud.

If you have any questions, don't hesitate to contact me.

Thank you,

--
