

## **Revised Waste Management Plan**

### **Mesa H2-797 Pad**

#### **DRILLING FLUIDS DISPOSAL**

Closed loop system will be used to separate solids from liquid. Dry cuttings will be stockpiled on location or transported off-site to an approved facility.

#### **CUTTINGS DISPOSAL**

1. On-site remediation & beneficial re-use
2. Garfield County Landfill in Rifle, Colorado
3. Metcalf Drill Cuttings Facility in Garfield, County
4. ECDC, East Carbon, Utah

Solids control equipment consisting of shale shakers, centrifuges, and flocculating unit will be utilized to separate drill cutting solids from liquid (water). Cuttings will be stockpiled on location for beneficial reuse. Any excess cuttings will be transported to commercial facilities at the Garfield County Landfill near Rifle, Colorado, the Metcalf Soil Treatment Facility near Parachute, Colorado, and ECDC Environmental, East Carbon, Utah.

#### **PRODUCED WATER INJECTION WELL**

Produced water from Caerus wells:

Water will be gathered via pipeline and trucks to the Mesa SWD Injection Facility. From there water volumes and pressures will be monitored as it is pumped downhole into the approved injection zone in the proposed Puckett H2-797 SWD. The well is under review as a Class II UIC, meaning that only produced water will be injected; no solids or cuttings will be disposed of via the injection well. Filter pots and chemical treatment will be used on the produced water to improve reservoir performance longevity.
