Pad slot #52. This well is a Rule 318A.a(4)D Horizontal GWA Well; Operator - Mineral Resources at the time - notified on all owners on 03/01/14 as defined in C.R.S. section 34-60-103(7) within the proposed spacing unit and has received no written objections per Rule 318A.e(6)B. Certification of objections was attached to the original, approved APD. SUA was attached to the original, approved APD.

We needed to sidetrack this well in order to successfully reach formation and run casing. See comments below and in correspondence. The BHL target is unchanged, thus a revised Well Location Plat and Revised Deviated Drilling Plan are not attached as they are not required.

We are having an issue on the GP Dairy 1-20-19 (API# - 05-123-40328-00). We are having issues getting back through our curve with a reamer assembly. We hit the Sharron springs shale at too high of an inclination and exposed too much of the formation. We have fought it for 3 days and are not having any success. The last attempt to get through this morning almost ended with us getting stuck.

Going forward we would like to set a 500' (17.5#) cement plug across the interval from 7000-7500MD. This will allow us to kick off again and we will drill through the Sharron springs closer to vertical, limiting exposure of the formation.

Total MD drilled to: 8205'

Surface casing - 9 5/8" 36# set at 1029'.

No fish in hole

The plan is to pump one 500' plug (243 sacks) with Halliburton Cement-17.5#

Proposed sidetrack point - 7100'

Objective formation of sidetrack/curve: Niobrara B

Proposed BHL: 1980 FSL 460 FWL Sec 19, T5N, R65W (Same as original APD).

We received verbal and email confirmation from Diana Burn on 1/23/15.
