COMMENTS:

WPX Energy will be using a synthetic based mud to drill the curve and lateral portion of the GM 728-14-33 HN1 well on the GR 14-28 Pad after setting and cementing intermediate casing. The synthetic based mud will be better suited for the high temperatures that we are seeing in the laterals and will also provide lubricity to reduce torque and drag. Attached please find a "Summary" document that covers the best practices for surface management of the fluid.

WPXENERGY will need to set up 400 bbl uprights to transfer the SBM to the tanks and process the SBM to clean it up. This will involve a centrifuge, pump, cuttings bin and generator. A liner will be placed underneath tanks and the cuttings/solids will be put into the containers we are using now and transferred to greenleaf. Any questions should be directed to WPX Drilling Superintendent, Douglas McAdam's (970) 618-7340 (cell).
