☐ **DIGITAL WELL LOG UPLOAD**

☐ **DOCUMENTS SUBMITTED** Purpose of Submission: _____

RECLAMATION**INTERIM RECLAMATION**

☐ Interim Reclamation will commence approximately _____

Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Interim reclamation complete, site ready for inspection.

Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

☐ Final Reclamation will commence approximately _____

Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

COMMENTS:

Following the current investigation regarding stray gas (remediation work plan 8936), this plan is presented in case the results from the CBL show that no adequate coverage is present above the Sussex and/or the under the Fox Hills. A MIT will be performed prior to running the CBL.

Based on the completion reports, the calculated TOC is at 3,996' which is 714' above the top of the Sussex, so no remedial cement is anticipated. The completion report also indicates that 200 sacks were pumped with a DV tool set at 970', which would cover 100' below the base of the Fox Hills (log indicates base of Fox Hills at 870') and would bring the cement to surface. In case the CBL does not show adequate coverage at least to 4,510' and/or the bottom of the staged cement is above 920', 1 sack of cement will be pumped for every 4' of cement coverage required above the Sussex and over the Fox Hills.

If the casing does not hold the pressure per rule 326, the leak will also be repaired with 1 sack of cement for every 4' of 4.5" casing. Initial method will be an annular fill with 1" tubing. If circulation is not achieved, the production casing will be perforated and the cement will be squeezed. Results of the CBL and MIT will be submitted to the Engineer before commencing remedial operations.
