Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

After completing cementing operations at the Bernhardt 4N66W6G drilling location, a hose was accidentally disconnected causing the release of approximately 18 barrels of drilling mud. The spill was immediately cleaned up and a majority of the spilled mud was recovered. No surface water or groundwater was impacted as a result of this spill.

How was extent determined?

On March 3, 2015, a release of approximately 18 barrels of drilling mud occurred at the Bernhardt 4N66W6G drilling location. The release volume was immediately contained and recovered. Impacted material was excavated and disposed of in the adjacent mud tanks on location. On March 5, 2015, six confirmation soil samples (SS01 - SS06) were collected from the excavation extent at approximately 3 inches below ground surface (bgs). Soil samples were submitted to Summit Scientific Laboratories in Golden, Colorado for analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX), naphthalene, and total petroleum hydrocarbons (TPH) - gasoline range organics (GRO) by USEPA Method 8260B. In addition, samples were analyzed for TPH - diesel range organics (DRO) by USEPA Method 8015. Analytical results indicated constituent concentrations were below COGCC Table 910-1 soil standards in the six sample locations. Soil analytical results are summarized in Table 1 and the laboratory analytical report is included as Attachment A. The excavation extent and soil sample locations are illustrated on Figure 2. Laboratory analytical results are below COGCC Table 910-1 soil standards. Consequently, PDC is requesting a No Further Action (NFA) determination for this release.
