I checked pressure reading and found gauge was broken. Replaced with new gauge and retested. There was no pressure on the Bradenhead as stated on Form 17, sent 9/12/14.

Thank you, Jack Crumley

Jack,
I'm not sure what happened to the one you sent before, but we'll get this one entered. It may have been the missing zero left of the 8221 in the API #121-08221. Please confirm the pressure on the gauge of 360 psi in the 9/5/14 inspection was not correct and explain.

Thank you,

Dirk Sutphin, PE

East Region Engineer

Jack,

Here is the email I sent you last week to jlccrumley@gmail.com. I did not get a bounce back message but am forwarding it to this address you told me on the phone today (jlccrumley@gmail.com). There is an extra c in the new address.

Please reply,

Dirk Sutphin, PE

Jack,
I am writing to you regarding the high bradenhead pressure our inspector noticed during her inspection dated 9/5/14.

>>>>>

Comment: BH 360 psi. Contacted Mr. Crumley. Gauge may not be working. He will get a BH pressure on 9/9/2014.

CA Date: 09/15/2014

CA: Complete a Bradenhead Test on well and submit Form 17 to COGCC Engineering.

>>>>>

CA is Corrective Action.

Please send me a Form 17 and explanation by March 27, 2015, end of next week. If there is truly this much bradenhead pressure there is a problem that needs to be addressed.

Thank you,

Dirk Sutphin, PE

East Region Engineer
