Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

PDC began removing the produced water vessel at the Ursula #2 tank battery on March 19, 2015. On March 23rd when crews returned to the location, groundwater had infiltrated into the excavation. The groundwater did not appear to be impacted and photoionization detector readings from soil removed from the excavation were not elevated. Results from a groundwater sample submitted for laboratory analytical testing indicated petroleum hydrocarbon concentrations above COGCC Table 910-1 groundwater standards.
