Hi Melissa,

Per our conversation please make the following edits to facilities count and pipeline descriptions:

Wells: change from 13 to 10  
Pumpjacks: please change from 13 to 10  
Gas or Diesel Motors: please change from 13 to 10  
Oil Tanks: please change from 32 to 28  
Separators: please change from 13 to 23  
VOC Combustor: please change from 10 to 16  
Water Tanks: please change from 14 to 10  
Buried produced water vaults: please change from 7 to 4  
Gas Compressors: please change from 12 to 9  
Other - Vapor Recovery Towers: please change from 6 to 4

Regarding the pipeline descriptions:

Please change number of oil gather lines from Four (4) to Two (2)  
Please change number of produced water gathering lines from Four (4) to Two (2)  
Please also change the diameter of produced water gathering lines from 8" to 4"  
Please Add " One (1) Gas lift line: 6" coated steel"

Operator Comments and Submittal - Please replace text with the following:

Facilities were permitted on this location, as well as a centralized production facility (State Seventy Holes CPF A-5 Pad - Location 441192). BCEOC, LLC does not intend to build out all of these facilities, but has listed extra facilities on this location to allow flexibility and optimization of operations. Should economic conditions dictate, the wells planned on this location will be produced to a facility constructed on this location in lieu of the referenced centralized production facility. Current plans are to build out the referenced State Seventy Holes CPF A-5 Pad and construct/install only minimal necessary equipment on the drilling location. Upon completion of interim reclamation, a sundry will be submitted to verify the actual equipment installed on this location.

Thanks for your cooperation!
