Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On March 31, 2015, hydrocarbon impacts were discovered during abandonment activities at the Richardson V3-2 production facility. Approximately 40 cubic yards of impacted material were excavated and transported to Front Range Regional Landfill in Erie, Colorado for disposal. Groundwater was encountered in the excavation area at approximately 3 feet below ground surface. A groundwater sample (GW01) was collected from the excavation area and submitted to Origins Laboratory in Denver, Colorado for analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX) by USEPA Method 8260B. Analytical results received on April 1, 2015, indicated benzene, toluene, and total xylenes concentrations were above applicable COGCC Table 910-1 groundwater standards. Excavation activities are on-going at this location.
