

## Summary

Annotation by Neel Duncan

Initial Fire 4/17/2015:

The lightning strike hit around 1:08 PM on April 17, 2015. The intensity of the fire limited response and cleanup to perimeter containment and runoff to irrigation ditch. The fire was "put out" at around 03:00 AM, However, it reignited and burned until Monday Morning.

Irrigation Ditch 4/17/2015:

Exposure to the Irrigation ditch was quickly controlled through Vacuum trucks (simply removing the water to prevent further spread and a series of booms. Oil exposure was found on the edges of the ditches and pooling at the end of the pond. The ditches were cleaned using a combination of manpower and hydro-vacs. Much of the ditch area was inaccessible because of mud and lack of road access.

Staining on side of ditch as water level dropped.

Staining on side of ditch as water level dropped.

Booms were also placed strategically along the county ditch (Note the water had been sucked out at this point) Pictures take 4/18/2015:

Last set of booms

Containment 4/18/2015

On Saturday, we were able to begin assessment of the affected areas:

Containment & off-load pad

Run-off ditch (contained)

Drainage ditch (contained)

Off-load ditch (on cement)

4/18/2015 Affected Areas Cont.
