Blair,

Based on the review of site information and data provided, it is the COGCCs opinion that surface water monitoring will suffice and monitoring wells will not be required as they relate to this project.

Surface water samples shall be analyzed for: total petroleum hydrocarbons (diesel and gas range organics), benzene, toluene, ethyl-benzene, xylenes, pH, specific conductance, total alkalinity, total dissolved solids, bromide, chloride, fluoride, nitrate, nitrite, sulfate, calcium, iron, magnesium, manganese, potassium, selenium, and sodium.

Thanks

Alex

Alex and Steve – thank you for your help on getting these documents reviewed.

Oxy has not begun reclaiming the Pond 13E and Pond 13W facilities as Garfield County put a COA onto the location indicating that construction cannot occur before July 1 of each year to protect Greater Sage Grouse production areas.

Since we will be requesting to chance a COA with GarCo, Oxy will need a letter indicating that based on topography in the area of the site; the COGCC agrees that surface water monitoring will be preferred as opposed to monitoring wells for this project. Could you prepare a document indicating this to include in our submittal to Garfield County? Once we receive this letter, Oxy will submit the Resolution response document to Garfield County for approval. Once approved, Oxy will provide final GarCo approval to the COGCC. Financial assurance will also be included in the correspondence to the COGCC.

Please let me know if you have any questions or concerns with the provided request and information.

Thank you,

Blair K. Rollins

Blair-

Please see attached.

I believe the following is missing on OXYs part:

- Local government approval, and
- Financial assurance.

Has OXY started closing the Pit Facility's Pond 13 E (Facility ID 414403) and Pond 13 W (Facility ID 414404)?

Is there anything you need from the COGCC for GARCO?

Thanks

Alex
