SUNDRY NOTICE

Submit a signed original. This form is to be used for general, technical and environmental sundry information. For proposed or completed operations, describe in full in Comments or provide as an attachment. Identify Well by API Number; identify Oil and Gas Location by Location ID Number; identify other Facility by Facility ID Number.

OGCC Operator Number: 100185 Contact Name Chris Hines
Name of Operator: ENCANA OIL & GAS (USA) INC Phone: (970) 285-2653
Address: 370 17TH ST STE 1700 Fax: ()
City: DENVER State: CO Zip: 80202-5632 Email: chris.hines@encana.com

OTHER CHANGES

☐ **REMOVE FROM SURFACE BOND** Signed surface use agreement is a required attachment

☐ **CHANGE OF WELL, FACILITY OR OIL & GAS LOCATION NAME OR NUMBER**

From: Name NP EF07B Number N30 595 Effective Date: _____

To: Name _____ Number _____

☐ **ABANDON PERMIT: Permit can only be abandoned if the permitted operation has NOT been conducted. Field inspection will be conducted to verify site status.**

☐ WELL: Abandon Application for Permit-to-Drill (Form2) – Well API Number _____ has not been drilled.

☐ PIT: Abandon Earthen Pit Permit (Form 15) – COGCC Pit Facility ID Number _____ has not been constructed (Permitted and constructed pit requires closure per Rule 905)

☐ CENTRALIZED E&P WASTE MANAGEMENT FACILITY: Abandon Centralized E&P Waste Management Facility Permit (Form 28) – Facility ID Number _____ has not been constructed (Constructed facility requires closure per Rule 908)

OIL & GAS LOCATION ID Number: _____

☐ Abandon Oil & Gas Location Assessment (Form 2A) – Location has not been constructed and site will not be used in the future.

☐ Keep Oil & Gas Location Assessment (Form 2A) active until expiration date. This site will be used in the future.

Surface disturbance from Oil and Gas Operations must be reclaimed per Rule 1003 and Rule 1004.

☐ **REQUEST FOR CONFIDENTIAL STATUS**

☐ **DIGITAL WELL LOG UPLOAD**

☐ **DOCUMENTS SUBMITTED** Purpose of Submission: _____

RECLAMATION

INTERIM RECLAMATION

☐ Interim Reclamation will commence approximately _____

Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Interim reclamation complete, site ready for inspection.

Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

☐ Final Reclamation will commence approximately _____

Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

COMMENTS:

This form is being submitted as a status update for a pit closure (285021) remediation project (7167) on the N30 595 well pad (335670) in the North Parachute area of operations (Grand Valley Field).

In support of this project, a soil auger rig was used to characterize subsurface impacts that may have resulted from operation of the pit, and if needed install in-situ remediation wells. When field screening and laboratory analysis indicated hydrocarbon impacts, eleven (11) soil vapor extraction (SVE) wells and five (5) groundwater monitoring wells were installed. These efforts, and the discovery a diesel-like hydrocarbon product in several groundwater monitoring wells within the former pit footprint were reported in a previous status update for this project (400786233). Additional site investigation and project information were requested, and are provided here.

Under the Unified Soil Classification System (USCS) the soil lithology at the project site consists of a dark tan-brown inorganic clay. The clay lithology consists of interbedded angular shale pieces, with fine silts and sub-angular to angular sands, and low to medium plasticity. Soil assemblages of the material range from clay 50-60%, silts 35-45%, sands 15-25% throughout the site. The attached fence diagram illustrates the results of soil logging during site characterization efforts conducted in 2013.

Using the installed groundwater monitoring wells, an environmental contractor developed a groundwater elevation map which confirmed the direction of groundwater flow to be south by southwest towards the East Fork Parachute Creek. The contractor also prepared figures illustrating the radius of influence on groundwater monitoring well ENPR21MW, and continued to collect operations and maintenance (O&M) readings on the SVE wells. The program of enhanced fluid recovery (EFR), initiated in October, 2014 is now on a monthly schedule to focus on active recovery of the product identified at this location. The data collected (volume recovered and inches of product) as part of the EFR effort will provide information on the groundwater flow rate and overall success in product recovery. Attached is a report from the contractor, detailing the work that has been completed to date on this project, and summarizing the results of field data collection and laboratory analysis.

Groundwater results continue to be below COGCC Table 910-1 allowable concentrations, and there is no evidence that the identified impacts pose any threat to the East Fork Parachute Creek, that extent of impact extends offsite, or that the extent of impacts is expanding within the project site.

Encana proposes to continue with the monthly program of enhanced fluid recovery (EFR) and operations and maintenance (O&M) throughout 2015. With approval of this approach, a report of findings will be provided in the second quarter of 2016 with further recommendations on how to proceed with remediation efforts. If at any time, evidence that impacts have extended offsite is discovered the COGCC will be notified immediately.

Attachments:

- Geologic Fence Diagram – illustrates soil boring locations and remediation system installation.
- Radius of Influence Diagrams – ENPR21MW monitoring well
- Contractor Report of Work Completed and Findings

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million)

Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____

COMMENTS:

Best Management Practices

No BMP/COA Type

Description
