#### **Check if impacted or threatened by spill/Release (please answer Yes/No to all that apply):**

Waters of the State ☐ Residence/Occupied Structure ☐ Livestock ☐ Public Byway ☐ Surface Water Supply Area ☐

As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

The release was caused by corrosion of the produced water tank. Estimated 10 bbls of produced water leaked out of the tank into the dirt SPCC containment, saturated through a portion of the berm, and migrated 10' to the southwest of the SPCC containment. Though the spill reached a rill on the edge of the pad, it did not leave the footprint of the pad surface, so was contained on location.

Agency	Based on review of information presented, it appears that no further action is necessary at this time, and COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, then further investigation and/or remediation activities may be required at the site.  Ensure that dirt berm is either adequately compacted or lined to prevent saturation or leakage. Berms must be impermeable.	5/18/2015 3:21:09 PM
