Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A production tank drain line was leaking and spread underneath the production tank. Synergy has removed the production tank and recovered all contaminated soil that was detectible with a PID. We placed all contaminated soil on a liner and then hauled the contaminated soil to waste management. Analyticals and manifests will be uploaded on the website as soon as they are recieved. The drain line on the back of the production tank has been replaced.
