As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During routine operations, a line failure was discovered on the 16-0000-6069-6" Pipeline. An unknown volume of oil was released into the subsurface from a corrosion hole in the pipeline. The line was isolated and blown down, and impacted soil was excavated from the area surrounding the release point. Excavation activities are ongoing; additional information will be provided in a supplemental Form 19. A topographic Site Location Map showing the location of the release is attached as Figure 1.
