30-Day Blow Down Test Procedure

During bradenhead test procedures the above well has been determined to present conditions needing further review and possible action. Please allow Anadarko Petroleum Corp. to vent bradenhead valve on the subject well to an enclosed tank for 30 days in order to test and determine if further remediation to the wellbore will be necessary.

The bradenhead will be vented for 30 days, then shut-in for 7 days and a new Bradenhead test performed. This procedure may be repeated up to three cycles. At the conclusion of the cycles, if the pressure has not satisfactorily decreased a remediation plan will be proposed.

CONDITIONS OF APPROVAL, IF ANY:**COA Type****Description**

	1) Please submit form 17 for previous tests and after each new test. 2) Collect and analyze production and bradenhead gas samples for gas composition and stable isotope analysis. The stable isotope analysis should include the d13C1, d13C2, d13C3, d13C4, d13NC4 ,d13IC5 , d13NC5, d13C6+ and dDC1. And carbon isotopes of CO2 if possible d13 CO2 and d18O CO2. In addition H2S. 3) Collect and analyze production and bradenhead hydrocarbon liquid samples for composition and stable isotope analysis. The stable isotope analysis should include the d13C1, d13C2, d13C3, d13C4, d13NC4 ,d13IC5 , d13NC5, d13C6+ and dDC1. And carbon isotopes of CO2 if possible d13 CO2 and d18O CO2. In addition H2S. 4) Collect and anayze production and Bradenhead water samples for analysis of Volatile Organic Compounds (VOCs) via EPA Method 8260 or similar, and for Semivolatile Organic Compounds (SVOCs) via EPA method 8270 or similar. In addition, analyze the major cations and anions so that we can better make an evaluation of the source of the water. This would include Na, K, Ca and Mg for cations and sulfate, chloride, bromide and total alkalinity (including bicarbonate, carbonate and total alkalinity) plus a measurement of total dissolved solids.
