Sample
Candidates.pdf (401 KB)

Brian,

We are planning to go to the Rulison area to sample some gas wells as part of the work proposed in our work plan. Attached is a diagram showing the wells proposed to be sampled. Please review and provide any recommended changes you may have. It is my understanding the information was obtained from your website. One question, I seem to recall Presco had a well about 1 and 1/4 mile away from the DOE Rulison Site, but I don't see it here. Do you know the status of this well? Was it a joint venture with another company? Is there a lag in get info onto the maps on your website? It is possible the well is drilled and shut in but not completed. Hope all is well.

Pete

Subject: Rulison Sampling Candidates

Hi,

The attached PDF file shows the 5 wells I am proposing to sample for the Rulison project. All of these wells are operated by Encana Oil & Gas Inc. There is a Pioneer Natural Resources well northwest of the Encana well D-16-7-94 S. Federal, if it would be desirable to sample from a second company. I'll be doing some additional checking on these wells to see if there is any reason to replace any with other wells. Please let me know if there are any reasons that should be considered in making this selection.

Thanks,

Craig
