Shayelyn,

COGCC is in the process of reviewing the Form 2A for Gabel 36N-8HZ (doc no 400864516). In order for us to complete our review please address the following:

1. Under water resources, No is checked for an Army Corps of Engineers Section 404 permit, yet under the comments is a statement that a nationwide permit was submitted to the Army corp of Engineers. If the comment is correct, I will change the answer on the 2A to yes and please provide a copy of the permit.
2. Please provide a Green Completions BMP for the salable gas time frame in regards to flowback and production.
3. At the end of the comment period, after 9 pm on 9/7/2015, please provide a 306e certification including any information regarding public comments or meeting requests.

Contact me if you have any questions.

Thank you,  
Rebecca

Hi Rebecca,

Please see my responses to your questions, in red, below. I have also attached the 306.e letter.

Let me know if you have any questions.

Thank you!  
Shaye

**Subject:** Gabel 36N-8HZ doc no 400864516

Shayelyn,

COGCC is in the process of reviewing the Form 2A for Gabel 36N-8HZ (doc no 400864516). In order for us to complete our review please address the following:

1. Under water resources, No is ched for an Army Corps of Engineers Section 404 permit, yet under the comments is a statement that a nationwide permit was submitted to the Army corp of Engineers. If the comment is correct, I will change the answer on the 2A to yes and please provide a copy of the permit.

There was no 404 permit submitted to the Army Corps of Engineers because it was not needed. There was a different Nationwide permit submitted which is what my comment refers to. I apologize for the confusion here. Let me know if you have any questions on this!

2. Please provide a Green Completions BMP for the salable gas time frame in regards to flowback and production.

604c.(2).C. Green Completions: Temporary above ground polyethylene water pipelines will deliver water to location operations from larger trunk lines to reduce truck traffic and minimize air pollution. Pipeline infrastructure is in place prior to completions operations to ensure saleable gas, once hydrocarbons are cut, is sent directly to sales without flaring during flowback.

Environmental Control Devices or Volatile Organic Compound (VOC) Combustors will be used to control working and breathing vapor losses for oil and water tanks.

3. At the end of the comment period, after 9 pm on 9/7/2015, please provide a 306e certification including any information regarding public comments or meeting requests.

Please see letter attached.

Contact me if you have any questions.

Thank you,

Rebecca
