Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During pit closure activities, a contractor was removing sludge from the pit, utilizing a hydro vac. The contractor opened a valve on the back of the truck to hook up a hose when the load started to spill out. He immediately tried to close the valve but couldn't because a rock had blocked it. Approximately 3 bbls of pit bottom sludge was spilled on location. The spill did not leave the location.

Environmental	Based on review of information presented, it appears that no further action is necessary at this time, and COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, then further investigation and/or remediation activities may be required at the site.	10/29/2015 9:07:44 AM
