## **Best Management Practices**

### **No BMP/COA Type**

### **Description**

1	Drilling/Completion Operations	<p>317.p BMP</p> <p>One of the first wells drilled on the pad will be logged with an open-hole resistivity log with gamma-ray from TD to into the surface casing. All wells on the pad will have a cement bond log with gamma-ray run on the production casing (or intermediate casing if production liner is run). All wells on the pad will have the horizontal portion of the wellbore logged with a measured-while-drilling log with gamma-ray. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs shall clearly state "No openhole logs were run." The Form 5 for a well without open-hole logs shall clearly identify (by API#, well name &amp; number) the well in which open-hole logs were run.</p>

### General Comments

Permit	Final Review Completed. No LGD or public comment received.	11/25/2015 7:38:30 AM
Permit	This permit is for the Lateral 2 hole of a pilot/lateral drilling plan and this permit should have a sidetrack designation (-03) in the API number.	11/18/2015 2:46:11 PM
Engineer	For purposes of determining which water wells are to be sampled and analyzed, a plat map was prepared depicting the location of all the proposed gas well laterals and includes a 1500' envelope that is used to take into account the 1/4 mile of investigation as required by rule 608 (see SELECTED ITEMS REPORT in the pilot hole). Because a PA well originally drilled as a DK or conventional well has been found within the 1320' buffer zone of investigation, selected water wells to be sampled and analyzed will be extended to 1/2 mile if none are found within a 1/4 mile of the lateral.	11/13/2015 3:09:21 PM
Engineer	This APD pertains just to the Coal Bed Methane (CBM) upper lateral portion of the well. Both the surface and production casings were previously assessed and approved in the constant angle (straight line) pilot well and have been carried forward with this permit for reference purposes. Initial drilling on all laterals will commence at a depth near the bottom end of the production casing depicted in the pilot well (API ex "00"). The casing in this lateral will be a slotted liner and will not be cemented in place. These laterals will be completed naturally and will not be fracture stimulated. The Statewide HZ Offset Well Policy does not apply to horizontal wells not being fracture stimulated in the pay zone.	11/13/2015 3:08:53 PM
Engineer	A previously plugged and abandoned well was found within the 1320' envelope (Pool * Fred Operation Co. Jones #1 API #067-05220) and the required plugging assessment from the operator's engineer was submitted (see attachments to the permit). The PA assessment was reviewed by myself and deemed sufficient.	11/13/2015 3:08:21 PM
Permit	Passed completeness.	11/4/2015 3:17:06 PM
