Good Morning NingNing,

On the 26th Of September we started installing the liner for the secondary containment wich was completed on the 5th of October. The liner that was installed and welded together was 26 mil woven coated liner. We did have to use 600ft of 6inch seam tape for extra protection around the bottom of the tank due to that liner being HDPE wich is a different material. It was welded as well the best as possible so the tape is an extra insurance that is made for this type of applications. The liner is 90,300 SQF. If you have any other questions please fill free to email me or call thanks.
