**Re: No Further Action Status Request  
HSR-B/R D 15-20, 16-20 Tank Battery  
COGCC Remediation No. 8261  
SWSE 20-T3N-R67W**

Dear Mr. Gintautas:

Kerr-McGee Oil and Gas Onshore LP (Kerr-McGee) is submitting this letter report as an update to the Form 27, submitted on March 3, 2014, for the HSR-B/R D 15-20, 16-20 tank battery. We are requesting a No Further Action (NFA) status for this site.

On May 7, 2013, approximately 1.5 barrels (bbls) of oil overflowed from the production tank and approximately 0.5 bbl of oil overflowed from the emissions control device (ECD). The release was attributed to a failure of the automation equipment. Upon discovery of the release, pressure was released from the separator. A vacuum truck was used to recover approximately 0.5 bbl of oil from the concrete pad and gravel beneath the ECD and approximately 1.0 bbl of oil from inside the tank battery berm. The production tanks were removed and the petroleum hydrocarbon impacted soil was excavated. Approximately 350 cubic yards of petroleum hydrocarbon impacted soil and gravel were removed from the site and transported to the Front Range Landfill in Erie, Colorado, for disposal. Kerr-McGee contracted LT Environmental, Inc. (LTE) to document excavation activities, collect confirmation soil and groundwater samples from the excavation, install groundwater monitoring wells, conduct quarterly groundwater monitoring, and track the laboratory analytical results. A topographic Site Location Map depicting the general location of the release is attached as Figure 1.

On May 6 and 7, 2013, confirmation soil samples were collected from the excavation sidewalls for total petroleum hydrocarbon (TPH) analysis by United States Environmental Protection Agency (USEPA) Methods 8015 and 8260B and benzene, toluene, ethylbenzene, and total xylenes (BTEX) analysis by USEPA Method 8260B. The soil sample analytical results confirmed that TPH and BTEX concentrations were less than the Colorado Oil and Gas Conservation Commission Table 910-1 allowable levels at the extent of the excavation. The excavation soil sample results are summarized in Table 1.

Groundwater was encountered in the excavation at approximately 6 feet below ground surface. One groundwater sample (GW01) was collected from the excavation and submitted for BTEX analysis by USEPA Method 8260B. The benzene concentration in the GW01 groundwater sample exceeded the Colorado Groundwater Quality Standard (CGWQS) of 5.0 micrograms per liter ( $\mu\text{g/L}$ ) at a concentration of 480  $\mu\text{g/L}$ . Based on the groundwater analytical results, 30 bbls of impacted groundwater were removed from the excavation and disposed of at a licensed injection facility. Five gallons of MicroBlaze<sup>®</sup> microbial solution were applied to the groundwater and exposed smear zone prior to backfilling the excavation. The excavation area was restored to its pre-release grade and the tank battery was reconstructed to the west of its former location. The general site layout, excavation outline, and excavation soil and groundwater sample locations are depicted on the Excavation Site Map provided as Figure 2. The excavation groundwater results are summarized on Table 2.

In order to assess the extent and magnitude of the residual dissolved-phase groundwater impacts, four monitoring wells (MW01 through MW04) were installed at the site in August 2013. During the initial quarterly groundwater monitoring event conducted in September 2013, BTEX concentrations in all four monitoring wells were less than the CGWQS and less than the laboratory reporting limit of 1.0  $\mu\text{g/L}$ . Based on the groundwater analytical results, wells MW01 through MW04 were designated as point of compliance (POC) wells. Groundwater monitoring has continued on a quarterly basis. The monitoring well locations are provided on Figure 3A.

On November 19, 2013, groundwater monitoring wells MW01 through MW04 were surveyed to determine the groundwater flow direction at the site. The relative elevation data confirmed the groundwater flow direction is to the northeast. The relative groundwater elevation data are provided in Table 2.

Based on the surveyed flow direction, one additional monitoring well (MW05) was installed north-northeast of the excavated source area on June 8, 2015, to ensure POC had been established. Soil staining, odors, and/or elevated photo-ionization detector headspace readings (greater than 0.0 parts per million) were not encountered while continuously sampling the soil boring completed as monitoring well MW05. The boring log for monitoring well MW05 is attached.

As of the June 2015 quarterly monitoring event, BTEX concentrations in monitoring wells MW01 through MW04 have remained compliant with the CGWQS and the laboratory reporting limit of 1.0  $\mu\text{g/L}$  for four consecutive quarterly monitoring events. On June 15, 2015, the new down-gradient monitoring well (MW05) was sampled for BTEX analysis by USEPA Method 8260C. BTEX concentrations were less than the CGWQS and less than the laboratory reporting limit of 1.0  $\mu\text{g/L}$  in well MW05. The groundwater analytical results are summarized in Table 2. The laboratory analytical reports for the four most recent quarterly monitoring events are attached.

On August 3, 2015, the site was re-surveyed to include monitoring well MW05 and to reconfirm the groundwater flow direction. The relative elevation data confirmed the groundwater flow

direction is to the northeast. Groundwater Elevation Contour Maps for each of the last four quarterly monitoring events (third quarter 2014 through second quarter 2015) are provided as Figures 3A through 3D, respectively. The relative groundwater elevation data are provided in Table 2.

Remedial actions employed at the site included excavation of the source area, removal of impacted ground water from the excavation, and application of the MicroBlaze<sup>®</sup> amendment to the excavation groundwater. Based on these remedial actions and groundwater sample analytical results indicating BTEX concentrations in compliance with the CGWQS and less than the laboratory reporting limit of 1.0 µg/L for the duration of the monitoring program, Kerr-McGee is requesting an NFA status for this site.

Feel free to contact me at 720-929-6726 if you have any questions regarding this information.

Sincerely,

Kerr-McGee Oil & Gas Onshore LP

Attached are your analytical results for KMG - HSR-B/R D 15, 16-20 received by Origins Laboratory, Inc. September 16, 2014. This project is associated with Origins project number X409157-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

Project Name - KMG - HSR-B/R D 15, 16-20

Project Number - 014213107

Attached are your analytical results for KMG - HSR-B/R D 15, 16-20 received by Origins Laboratory, Inc. December 01, 2014. This project is associated with Origins project number X412019-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

Attached are your analytical results for KMG - HSR-B/R D 15, 16-20 received by Origins Laboratory, Inc. March 10, 2015. This project is associated with Origins project number X503111-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

Project Name - KMG - HSR-B/R D 15, 16-20

Project Number - 014213107

Attached are your analytical results for KMG - HSR-B/R D 15, 16-20 received by Origins Laboratory, Inc. June 15, 2015. This project is associated with Origins project number X506189-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.
