

Photo 1. View of the northern portion of the project area from the northwestern portion facing eastward. Vegetation is largely comprised of weedy tumble mustard (*Sisymbrium altissimum*), cheatgrass (*Bromus tectorum*), and widely spaced intermediate wheatgrass (*Thinopyron intermedium*).

Photo 2. View of project area from the northwestern portion facing center.

Photo 3. View of western portion of the project area from the northwestern corner facing southward. The majority of the vegetation here is tumble mustard from the previous growing season.

Photo 4. Typical birdseye view of vegetation within the western portion of the project area. Dried vegetation appears to be yellow tumble mustard and field bindweed (*Convolvulus arvensis*).

Photo 5. View of eastern portion of the project area from the southeastern corner facing northward. Dense, tall, and dry kochia (*Kochia scoparia*) plants are growing along the edge of the pad and in the interim reclamation area. These need to be removed.
