Mr. Ken Carlson  
Colorado Water Watch  
Colorado State University

RE: Sand Creek Monitoring Well Investigation

Dear Mr. Carlson,

Thank you for notifying the Colorado Oil and Gas Conservation Commission (COGCC) of the presence of dissolved gas in the recently installed Feit Monitoring Well ("Sand Creek MW") located in the southeast quarter, southeast quarter, Section 23, Township 6 North, Range 65 West near the intersection of Weld County Roads 47 and 66. As you are aware, COGCC Staff and the Colorado Water Watch collected additional water samples from the monitoring well on December 11, 2015 to confirm the presence of the dissolved gas and develop obtain additional analyses of the gas, if confirmed.

Laboratory results of the gas in the water samples collected from the monitoring well show that it contains methane, ethane, propane, butanes, pentanes and hexanes, all of which are indicative of a thermogenic origin for the gases. In addition, the stable isotope analyses performed on the dissolved gas confirm that the gases are thermogenic in origin. The initial laboratory results are attached to this letter.

Based on the analytical data COGCC will investigate the impact, focusing on identifying and stopping the source of thermogenic gas. Our investigation also will seek to determine whether methane is migrating through groundwater, and whether domestic water wells in the area have been affected. Specific actions may include:

- Engineering review of construction, production, and closure records for oil and gas wells in the vicinity of the Feit MW;
- Physical integrity testing of oil and gas wells in the vicinity of the Feit MW;
- Collecting and analyzing samples of produced gas from oil and gas wells in the vicinity of the Feit MW;
- Continued monitoring of the Feit MW;
- Testing other water wells in the vicinity of the Feit MW, including domestic water wells

COGCC will open a project file and all information collected during the investigation will be available to you, the land owner, and the general public. Additionally, if any oil and gas wells are found to lack integrity or are otherwise identified as a source of the dissolved gases found in the Feit MW, COGCC will require the wells to be plugged or repaired to prevent further impacts.

If you have any questions regarding COGCC's investigation into this matter please contact me at 970-461-2970, or Greg Deranleau, COGCC's Environmental Manager at 303-894-2100, ext. 5153.

Sincerely,

Richard R. Allison, P.G.  
Environmental Protection Specialist, Northeast Colorado
