Waters of the State ☒ Residence/Occupied Structure ☐ Livestock ☐ Public Byway ☐ Surface Water Supply Area ☐

As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A pressure release valve popped on a separator at the UPRC-63N66W/31SESE tank battery, resulting in the release of less than 1 barrel of condensate and oil. The condensate and oil misted outside of containment and settled onto the ground surface and settled onto a snow and ice-covered pond. Site investigation and cleanup activities are ongoing at the site. Following removal of the snow and ice from the pond, a surface water sample will be collected and submitted for laboratory analysis of BTEX. Confirmation soil samples will be collected from the release area and will be submitted for laboratory analysis of TPH, BTEX, pH, EC, and SAR (if applicable). The analytical results will be provided in a supplemental report. A topographic Site Location Map depicting the general location of the release is attached as Figure 1.
