S/A/V: **ACTION REQUIRED** Corrective Date: **04/08/2016**

Comment: **Cut slope has 6 - 8 inch deep rilling and sediment migration off slope. At northeast corner of the cut slope the soil is mostly gone and the remaining rock needs to be stabilized. The fill slope has 8 - 10 inch deep rilling as a result of where the water has flowed across and off edge of location towards drainage below. The gathering pipeline has developed erosion channels washing away soil from hillside. This has created a growing wash 1 -3 foot wide and greater than 3 foot deep around the west end of location. See link at end of report for path to downloadable pictures.**

CA: **Install and or repair BMP's per Rule 1002.f. Refer to the 1002.f guidance document for further details.**

Pits: NO SURFACE INDICATION OF PIT
