Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

We had a break in a gathering line on the Cervante 43-28 (API 05-071-09234) location that was found by crews in the area. Calls were made and the Lease operator was notified. The leak was isolated when he arrived. Most of the spill remained on the location but a small amount ran about 10' down the access road where it ended. It is estimated that 3bbls of produced water were spilled with No State Waters involved. Plans are being made to repair the line and investigate
