As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

This release occurred at the dump line on the battery wellpad - between the heater treater and tanks. We believe there was a paraffin block in the line, so we pumped 0.5 bbl of hot oil in the line to clear it, lost pressure and then saw about 0.5 gallon of oil surface on the ground. The fluid is contained to the dumphline area, repair of the line will begin on Monday, April 4.
