

## Introduction

Encana Oil & Gas (USA) Inc. (Encana) is submitting this Form 4 Sundry Notice to request final closure status for an earthen pit associated with Evacuation Creek Unit 7605 (COGCC facility # 315481, COGCC remediation number #5329). The pit was investigated, characterized and sampled by a third party consultant as authorized by Encana personnel. All samples were collected in accordance with Encana's Environmental Compliance Group's Sampling Procedures. The analytical results for the respective soil samples were within the COGCC Table 910-1 standards and are provided in Table 1 and Attachment A of this submittal. The text below provides the details of the site investigation. For a visual description of the site please refer to Figures 1 and 2 – Site Maps.

## Site Investigation

October 15, 2010 – The earthen pit was initially investigated and delineated by a third party contractor utilizing a PetroFlag field unit and a backhoe that was utilized for excavation. A five (5) point composite sample was collected from the pit's spoils and submitted to a laboratory for analysis. The excavated soil was returned to the point of origin after the sample was collected.

August 2, 2011 – The pit was reassessed by a third party contractor utilizing a photoionization (PID) meter, and was excavated using a trackhoe. Field screen readings were collected throughout the excavation process. There were minimal indicators of hydrocarbon impacts to the soil. PID readings were collected from soil on the pit walls and pit bottom. A grab sample was collected from a depth of twelve (12) feet. The stockpiled soil from the excavation was backfilled and compacted into the excavation. Five (5) background samples were collected from upgradient of the excavation site from a depth of approximately six (6) inches. These samples were sent the lab for analysis with respect to arsenic.

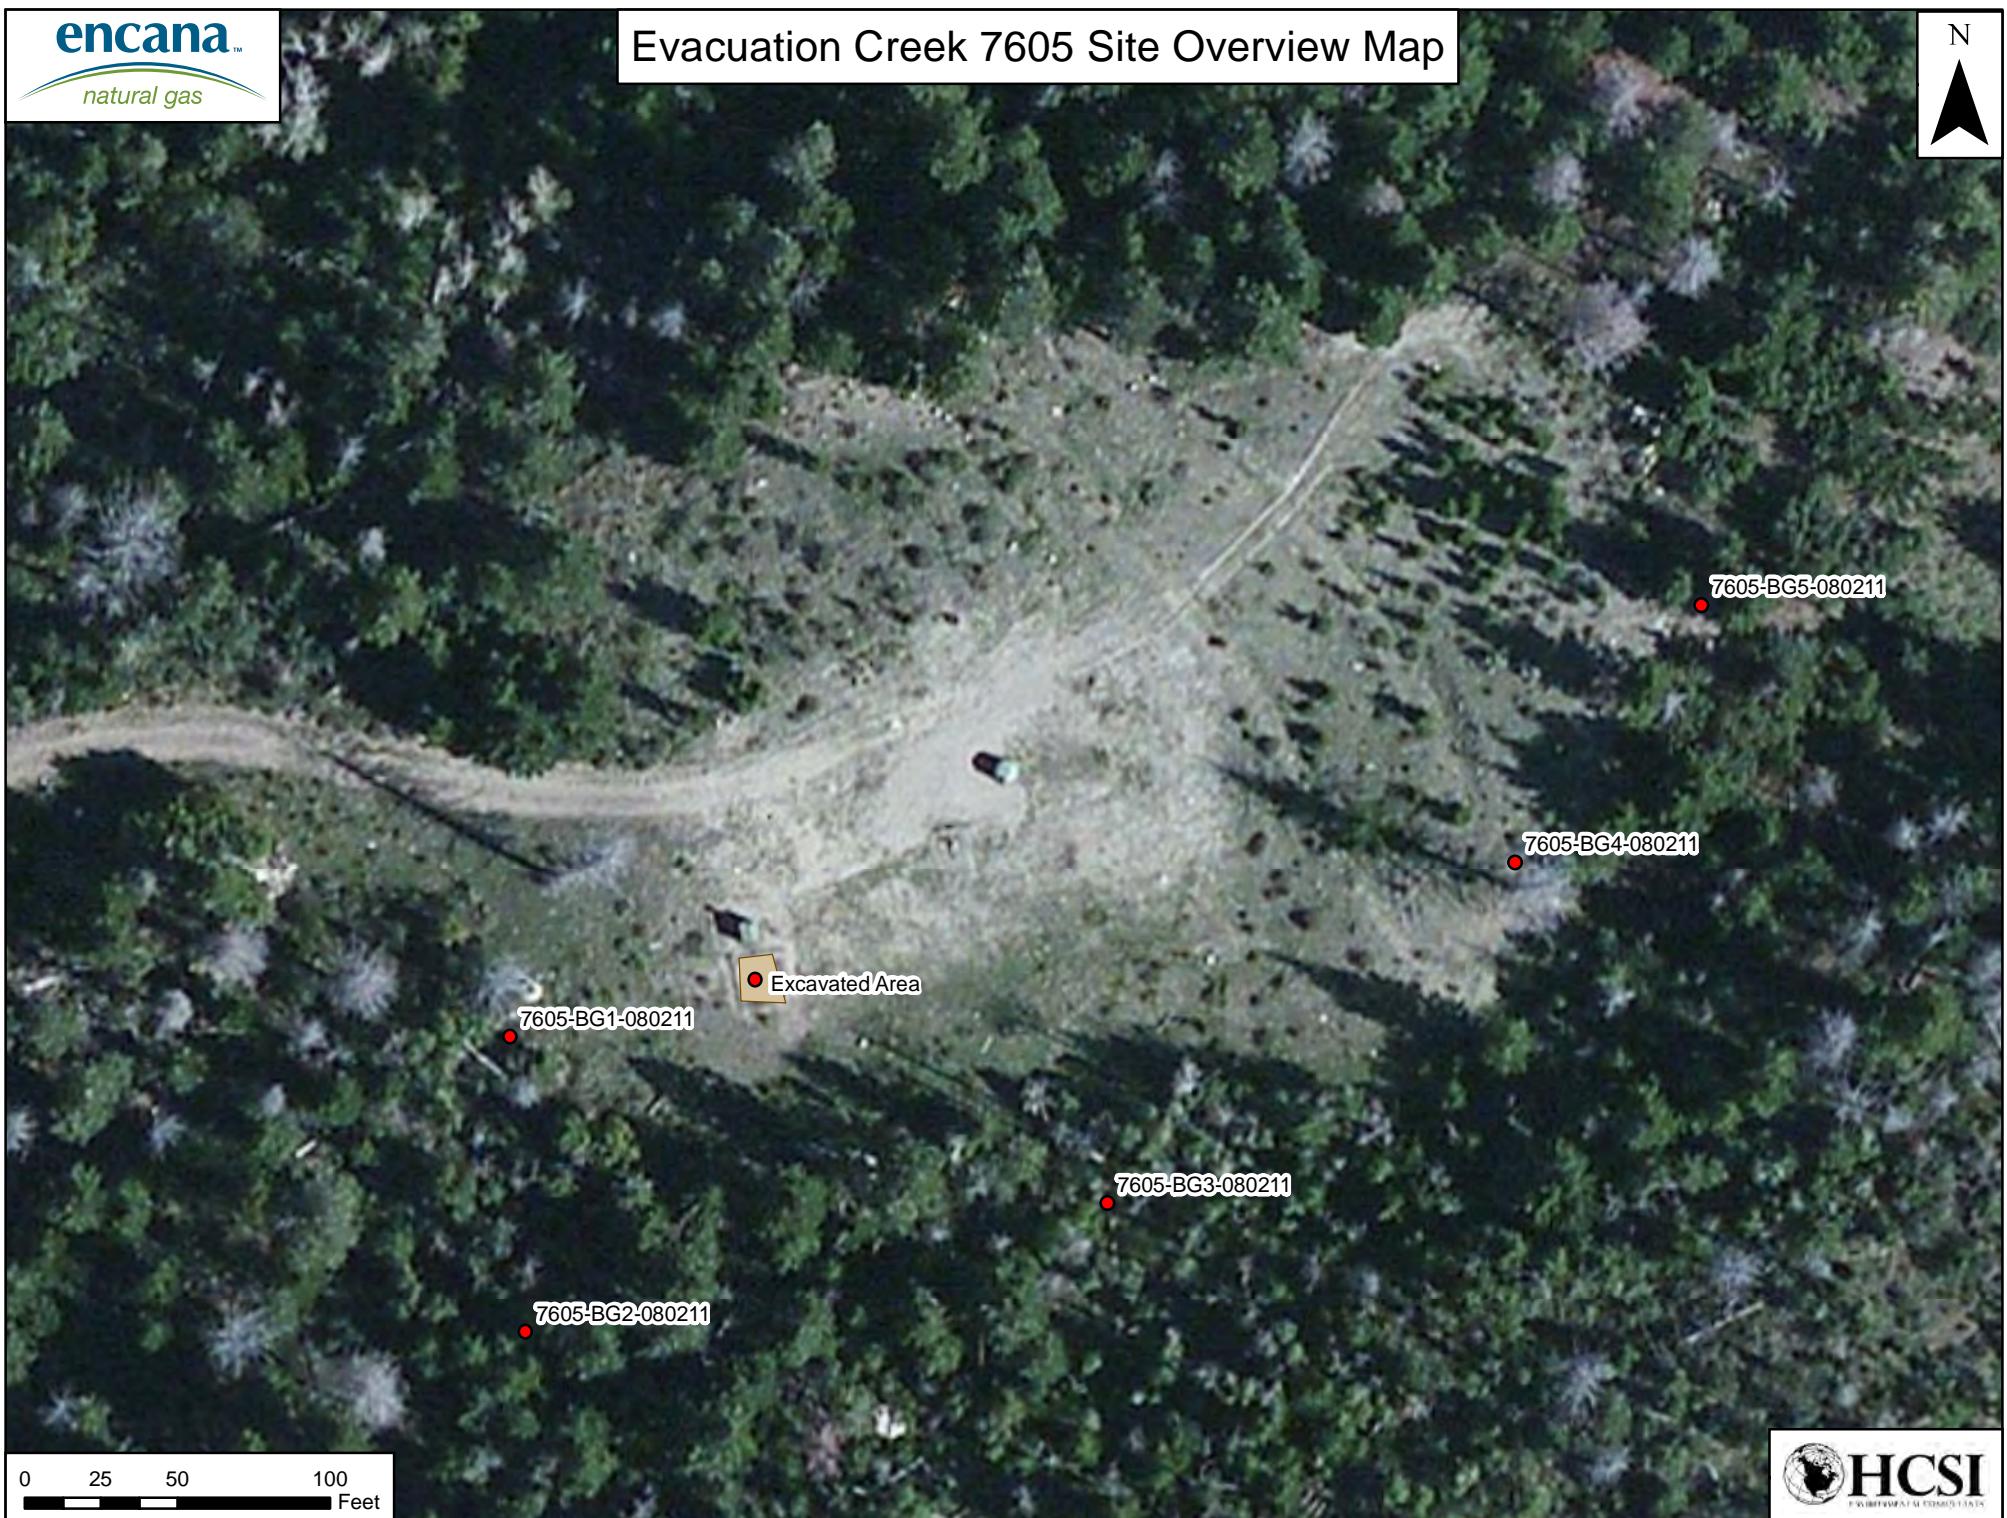

## Conclusion

Based on the site investigation and analytical results, the pit associated with the Evacuation Creek Unit 7605 is in compliance with the standards specified within COGCC Table 910-1. Encana respectfully requests that final closure be granted for the respective pit, COGCC remediation #5329.

#### Analytical Review

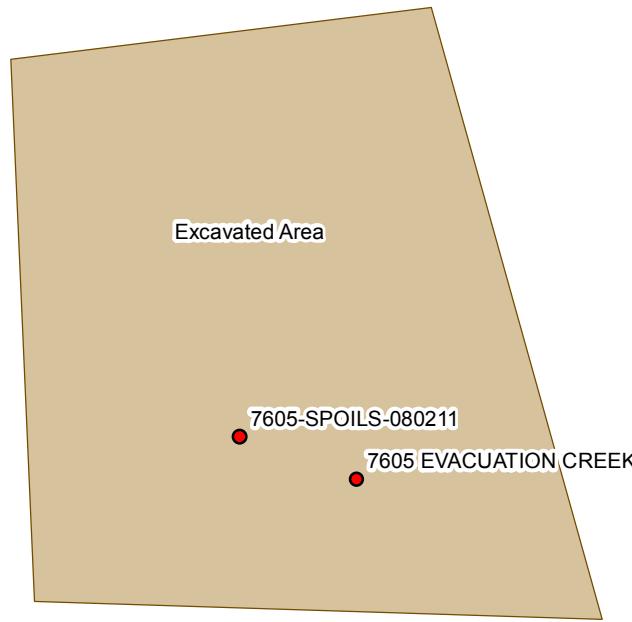

Sample results indicate that the soil within the earthen pit footprint on Encana's Evacuation Creek Unit 7605 well pad have exceedances of COGCC Table 910-1 allowable concentrations for arsenic (6.2 ppm). Though the arsenic concentration in the soil is above the allowable concentration identified in Table 910-1, the concentration is within the range of arsenic background values (3.9-8.0 ppm) in this area. Based on these results and footnote 1 to COGCC Table 910-1, Encana requests that the COGCC consider the higher range of background arsenic value(s) as the allowable concentration for this constituent. Please see Attachment A for the respective laboratory analytical results.

Re: **Encana Pit Closure 10-418**

Work Order: **1011047**

Dear Herman,

ALS Environmental received 3 samples on 02-Nov-2010 09:15 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 27.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Ann Preston".

Electronically approved by: Ann Preston

**Case Narrative**

---

Samples Evac Creek 7607 and Evac Creek 7605 were received after the hold time had expired for ERO, GRO, PAH and Volatile analyses.

Batch 30342 MS/MSD data for ERO was not related to this project's samples.

Batch 30340 sample Found Creek 7404 MS/MSD recoveries for several Metals were below control limits due to matrix interference.

Batch 30452 MS/MSD data for PAHs is not related to this project's samples.

Batch 30436 MS/MSD data for Hexavalent Chromium is not related to this project's samples.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.
