## FOR MULTI-WELL PADS AND PRODUCTION FACILITIES WITHIN DESIGNATED SETBACK LOCATIONS ONLY:

- ☐ Check this box if this Oil and Gas Location has or will have Production Facilities that serve multiple wells (on or offsite) and the Production Facilities are proposed to be located less than 1,000 feet from a Building Unit. *(Pursuant to Rule 604.c.(2)E.i., the operator must evaluate alternative locations for the Production Facilities that are farther from the Building Unit, and determine whether those alternative locations were technically feasible and economically practicable for the same proposed development.)*
- ☐ By checking this box, I certify that no alternative placements for the Production Facilities, farther from the nearest Building Unit, were available based on the analysis conducted pursuant to Rule 604.c.(2)E.i.

In the space below, explain rationale for siting the multi-well Production Facility(ies) that supports your Rule 604.c.(2)E.i determination. Attach documentation that supports your determination to this Form 2A.

Distance to nearest

downgradient surface water feature: 133 Feet

water well: 2219 Feet

Estimated depth to ground water at Oil and Gas Location 40 Feet

Basis for depth to groundwater and sensitive area determination:

The location was checked as sensitive due to potential shallow depth of groundwater. Depth to groundwater was determined from Water Well Permit No. 211370. Depth to first water bearing zone is 40' bgs, which is more indicative of the depth at which groundwater could be encountered if any water could infiltrate/percolate through and past the cuttings and through the minimum thickness of 20' of clay/shale.

## Best Management Practices

No	BMP/COA Type	Description
1	Storm Water/Erosion Control	SandRidge Exploration & Production LLC will implement a storm water and erosion control plan to prevent sedimentation and erosion.
2	Drilling/Completion Operations	One of the first wells drilled on the pad will be logged with an open-hole resistivity log and gamma ray log from kick off point to surface. All wells on the pad will have a cement bond log with gamma ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. the form 5 completion report for each well drilled on this pad will have all logs ran on that well noted and attached. If no logs were run, that also will be clearly noted on that well's form 5.
