**OPERATOR COMMENTS AND SUBMITTAL**

Comments One VOC burner will be added to the existing equipment on the location for a total equipment list of: 1 oil tank, 1 separator, 2 VOC combusters and 1 buried water vault. The current disturbance area of 0.1 acres will be increased by 0.25 acres to the northwest of the production facility in order to incorporate the production equipment and a tanker truck turnaround. This production facility services 2 existing wells: Trebor B12-03 well (API No. 05-123-13775, Loc ID 326856) and Trebor B12-04 (API No. 05-123-13500, Loc ID 323771). No drilling will take place, therefore the Drilling Program and Drilling Waste Management Program sections are left blank. The existing fence located 450' north of the production facility will not be effected by construction activities. The increased disturbance will remain and be stabilized with compacted road base material. Noble will provide via Sundry Notice, photos of the reference area during the growing season within 12-months of approval of the subject Form 2A.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.

## Best Management Practices

<b>No</b>	<b>BMP/COA Type</b>	<b>Description</b>
1	General Housekeeping	General housekeeping will consist of neat and orderly storage of materials and fluids. Wastes will be temporarily stored in sealed containers and regularly collected and disposed of at offsite, suitable facilities. If spills occur, prompt cleanup is required to minimize any commingling of waste materials with stormwater runoff. Routine maintenance will be limited to fueling and lubrication of equipment. Drip pans will be used during routine fueling and maintenance to contain spills or leaks. Any waste product from maintenance will be containerized and transported offsite for disposal or recycling. There will be no major equipment overhauls conducted onsite. Equipment will be transported offsite for major overhauls. Cleanup of trash and discarded materials will be conducted at the end of each work day. Cleanup will consist of patrolling the roadway, access areas, and other work areas to pick up trash, scrap debris, other discarded materials, and any contaminated soil. These materials will be disposed of properly.
2	Storm Water/Erosion Control	Stormwater management plans (SWMP) are in place to address construction, drilling and operations associated with Oil & Gas development throughout the state of Colorado in accordance with Colorado Department of Public Health and Environment (CDPHE) and General Permit No. COR-038637. BMP's will be constructed around the perimeter of the site prior to, or at the beginning of construction. BMP's used will vary according to the location and will remain in place until the pad reaches final reclamation.
3	Material Handling and Spill Prevention	Spill Prevention Control and Countermeasures (SPCC) plans are in place to address any possible spill associated with Oil & Gas operations throughout the state of Colorado in accordance with CFR 112.
4	Final Reclamation	Noble will provide via Sundry Notice, photos of the reference area during the growing season within 12-months of approval of the subject Form 2A.
