Thanks Alex

Taylor will include the BMPs for the permit on the COGCC website.

This email originates from an external source. Please be cautious before clicking on any links and/or opening any attachments.

Alex or Spence,

Have you had a chance to look at the BMPs for Ray Ranch?

Please let us know what is acceptable to you and we will include it in the BMP list for the COGCC permit and approve it for wildlife protections.

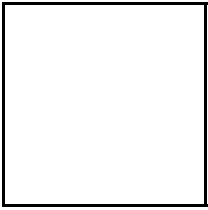

Thanks

Michael

Spence & Alex,

The following list includes the best management practices we had discussed for this location during last week's onsite tour. If you could let us know if Sandridge is still agreeable to these measures it would be much appreciated. If there are any questions or needs to discuss any of these items further, feel free to get in touch with Michael or myself.

1.

If oil and gas operations must occur within 4.0 miles of greater sage

-

grouse leks, the operator agrees to conduct oil and gas operations outside the period between March 1 and June 30.

2.

The operator and its contractors agree to restrict well site visitations to portions of the day between 9:00 a.m. and 4:00 p.m. during the leking, nesting and early brood rearing seasons (March 1 to June 30) within 4.0 miles of a lek.

3. The operator agrees to use hospital-grade mufflers for compressors, pump jacks, or other motors necessary to run operations at the site. Mufflers will be pointed upward to dissipate potential vibration.

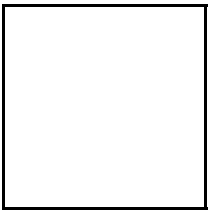

4. The operator has agreed to CPW's request to shift the pad location to be entirely on the south side of the existing access road. Maintaining a strip of sagebrush between the irrigated hay fields and the pad will benefit grouse during the brood-rearing season.

Thanks!
