Jacob,

Land application of drilling fluids and cuttings at the location was terminated by the operator prior to April 2016. Sampling & analysis provided by the operator demonstrates compliance with Table 910-1 thresholds and local background concentrations. All fluids and cuttings have been incorporated into native soils. Site was inspected by COGCC environmental staff in June 2015 (doc 678300450) with submission of a closure report requested by 2018.

Operator has demonstrated that the facility meets the environmental closure requirements; however, the facility will remain "Active" status until a final reclamation review has been performed. A sundry notice request for final reclamation review of the site should be entered to trigger the reclamation review.

If you have questions regarding the final reclamation review of the site please contact Chris Binschus or Denise Arthur (COGCC reclamation specialists). They are copied on this email.

Peter
