COMMENTS:

The Burr FD 23-259HC bradenhead has started to build pressure. We would like to perform an initial Bradenhead test (Form 17) and then leave open for 3 weeks, and then perform another Bradenhead Test Form 17 after a 7 day buildup. Repeat this process for up to three cycles (approx 90 days total). At the conclusion of the cycles the Bradenhead Test results will be reviewed and a recommendation will be drafted.

Background:

All wells on this pad were spud (surface pre-sets) 10/28/15 to 11/4/2015. Pressure tested and frac'd in April and May of 2016. Drilled out and put online mid June 2016. There was little to no pressure on the bradenheads prior to, during, or after frac/drill out. A few weeks after putting online the well started to build pressure on the bradenhead.

Burr FD 23-259HC (05-123-40876) Details:

5-1/2" monobore completion

9-5/8" Shoe Depth: 1401'

TOC: 5221' MD (good top, lighter slurry to surface)

Top Nio: 7093' MD

24 hr Bradenhead Buildup: 219 psi

(only gas escapes when you bleed it down, and it bleeds down in a matter of seconds, little volume)

Will attempt to capture sample for isotopic analysis
