

Daily Rig Report

Date: 08-11-2016

Well: Fetters 2-19

Tbg 800 psi	Csg 800 psi	BH 0 psi
6:00am-7:00am Crew Travel		
6:45am Morning Safety Meeting including JSA.		
7:00am Check fluids on all equipment, start and warm equipment, check brake linkage on rig, check pressures on well and bled down well.		
8:00am Pumped tbg kill and killed casing. Removed well head and stripped on a 7 1/16 3K flange.		
9:30am N/U BOP stack and R/U work floor. Well started flowing and attempted to kill running out of water.		
10:00am Water arrived on location and killed well.		
10:15am TOO H with 90 jts F-Nipple and a notched collar.		
11:15am Tallied tbg and made up RBP. RBP drag blocks would not go through bowl and decision was made to RIH with CIBP.		
12:00pm Pumped 55 bbl casing kill and TIH with CIBP setting at 2,714.13.		
1:15pm Rolled the gas out of the hole with 60 bbls and pressure tested to 400 psi.		
1:30pm Bled off pressure and TOO H with setting tool. Shut in well and secured all equipment for the evening.		
2:30pm-3:30pm Crew Travel		

Daily Cost for the Rig:

Thank you
