As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During evening of August 19, McClung 29-02D (05-045-15910) on the McClung 29-10 pad(335048) unloaded and brought up some plug pieces from a recent workover and plugged the dumps on the separator. The resulting upset sent a combination of produced water/condensate down the sales line to Laramie's drip tank at the Summit Gathering tie-in (L5, S29, T7S, R93 W Garfield County: 39.419345N -107.7980814W). The resulting accumulation of fluid overflowed the 100bbl drip tank and ~10bbbls spilled over into the containment. Fluids did not migrate outside the containment and Laramie pulled all fluids from the containment (on August 20 in the AM) and hauled them away. The separator was cleaned up and is operating as designed now.
