Good morning,

I had a question for you that came up this weekend. Does the ground water freeze in the winter and at what depth? Our water issues go away during the winter months while it is cold enough to freeze so could that be a ground water issue or would this be a surface water issue? That may change the way that we explore the cause of our problems right?

Thank you for your time,

Shawn Hagler

Mr. Hagler, turnaround time at labs is typically 10 business days or so. So I do not expect to have any lab results until the end of this week or early next week. At that time I will review the data and contact you again about lab results. I can email them to you when I have them. I do plan to visit both of the land application sites tomorrow morning to walk around and do inspections and perhaps to visit your property again if possible to see any changes. Once I have more thoroughly inspected the two land application sites I will have a better idea of next steps.

Has the cleanup of mud in your yard been completed to your satisfaction?

Peter

Good morning Peter,

I am just wanting to follow up from last Monday to see if you have any results from the water tests and what the next steps are? I drove by that Anadarko property yesterday on the corner of 31 and 26 to the East of me and there is still standing water in that pond and it is still in the ditches on both sides of the road. Thank you for your time and I look forward to hearing from you.

Regards,

Shawn Hagler

Shawn, I ran out of time to come by your home today.
Would someone be there on Monday afternoon?

Good morning Peter,

I wanted to follow up with you regarding our water issue at our home. Thank you for taking the time to come out and look at our property last Friday, I appreciate any help or guidance you can give us. At this point I want to file a formal complaint in order to get a full investigation going but I can't find the link on the website, can I do this with a phone call? Also, I have the basement waterproofing company out this week working on my problems and they claim they have never seen a water issue like this in all the years of waterproofing basements. They are willing to leave the little trenches open that they have created for water drainage for a couple of days if you'd have time to swing by again to see how much water is actually coming into my basement. They are calculating roughly 40-60 gallons an hour!

Let me know if you can come by today or tomorrow. Thank you again for your time.

Regards,

Shawn Hagler
