General Comment:

This is a follow up inspection to FIR Document #682401510- inspection date 11/15/16- to ensure the topsoil stockpile has been stabilized and sediment trap BMPs have been completed.

Reclamation - Storm Water - Pit

Storm Water:

Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs	Lease BMP Maintenance	Chemical BMPs	Chemical BMP Maintenance	Comment
Sediment Traps	In Process					

Comment: Operator was to provide additional communication regarding the stabilization of the topsoil stockpile and completion of sediment control BMPs per verbal agreement on 11/15/16. No such communication has been received and required work has not been performed. Topsoil consists of sandy soils susceptible to wind erosion in this region. As we enter into the winter months, increased precipitation has the potential for increased erosion. BMPs are in place but not completed. Rig has been on location; therefore, BMPs should be completed.

Corrective Action: Two corrective actions shall be performed by 12/16/16:

- 1) Submit a Form 4 Sundry Notice assigned to Chris Binschus with an attached schedule of planned BMPs to stabilize the topsoil stockpile per Rule 1002.c.
- 2) Stabilize the western location where soil has been moved from the cut slope and complete the sediment traps by installing a stabilized outlet to prevent sediment laden storm runoff from leaving location.

Date: 12/16/2016

Pits: NO SURFACE INDICATION OF PIT
