#### COMMENTS:

SandRidge E&P respectfully requests the right to flare due to several circumstances: 1. The closest/most practical pipeline tie-in point is over 100 miles away. 2. Construction of pipeline to said tie-in point will take over a year to obtain ROW, permits and construct along with costing over 50 million. SandRidge has started this process to permit & construct this gathering pipeline to market tie-in. 3. ~100 mcf/d will be flared. BTU content of the gas ranges from is ~1200-1600 with a H2S content of 0 ppm 4. SandRidge has complied with Rule 805 b. (1.) 5. SandRidge will use CDPHE approved flaring method. SandRidge has an "in-house" air compliance team and has a local, Colorado based air/environmental advisory company to assist with monitoring of air & environmental compliance. SandRidge is working on several other possibilities for the produced gas such as: a small facility to process gas into natural gas liquids (still in the planning phases), a larger scale facility to generate power and send out through transmission lines (also in planning and logistics due to an intense process regarding engineering, permits, design, construct, etc.)
