Description

1	Drilling/Completion Operations	TEP will run triple-combo open hole logs from well TD up to base of surface casing on one of the first wells drilled on a multi-well pad. Remaining wells on the pad will be logged with either cased hole pulsed neutron or triple-combo open hole. Every well will also have a CBL log from well TD up through well surface. Form 5 Completion Reports will identify wells on the pad with triple-combo open hole logs.

General Comments

<u>User Group</u>	<u>Comment</u>	<u>Comment Date</u>
Permit	Spacing order 510-9 doesn't create a unit. Therefore I removed the distance to the unit boundary of 1661' and the comment restating the order, with operator approval. There is no change in the drilling and waste plan from the approved 2A. Final review complete.	01/05/2017
Engineer	Offset water well check: COGCC evaluated offset water wells within one mile of this proposed well's surface hole location. All permitted water wells within the search radius show zero for reported depths. Depths to formation tops in offset oil and gas wells, locally-available geophysical logs, and hydrogeologic information was used to evaluate the adequacy of the operator's proposed surface casing setting depth. Offset Well Evaluation: Existing offset oil and gas wells within 1,500 feet of this wellbore meet standards. No mitigation required. Horizontal wellbores API# 045-22314, GM 706-4-HN2 and API# 045-22453, GM 703-4-HN1 are completed in the deeper Mancos formation and adequate isolation of the Mesaverde is present across the vertical sections of the wellbores.	11/07/2016
Permit	Passed completeness.	11/04/2016
